EHR IN PRACTICE

CARECLOUD CHARTS

EXTENDED PROFILE

CareCloud

OVERVIEW

CareCloud Charts is a Health IT solution that supports financial and clinical workflows in one platform. The system’s architecture enables the development of custom apps through a developer-ready API so that practices can construct a solution that works for them

CareCloud Charts allows a high degree of both practitioner-specific and specialism-specific customization so that users get the benefit of a system tailored exactly to their needs. A range of extended functionality modules is available for practices to choose from, including telemedicine and Advanced Analytics - which provides a fast and flexible way to monitor and improve practices across the organization.

Elsewhere, CareCloud Charts offers revenue cycle management, a practice management module, a Meaningful-Use certified charting module to record patient information, and a patient engagement and social tool. This allows the physician to communicate with patients and work with peers to deliver the most effective medical practice.

CareCloud Charts is a cloud-based solution, so users can access the software on any device with a browser installed. A native clinical and admin iOS app allows secure access to patient data on the move. A range of implementation services is available from CareCloud, ranging from a basic ‘essential’ package to expert consultation and optimization.
