EHR IN PRACTICE

BLUEEHR

EXTENDED PROFILE

blueBriX

OVERVIEW

blueEHR is a fully customizable, cloud-based electronic health record (EHR) and health IT platform designed for healthcare organizations across specialties, including primary care, behavioral health, dental, and more.

With its emphasis on interoperability, compliance, and rapid deployment, blueEHR empowers practices to streamline operations while delivering high-quality, patient-centered care.

As blueEHR allows for full personalization, users can set up the system in a way that proves most productive for them, taking care of all processes and reporting without having to do it manually. Alongside this, pre-designed medical templates have been created to suit a wide range of medical specialties, and the patient portal shows important data in one clear, easily accessible place.

Voice recognition software allows clinicians to upload patient data in real-time, whilst telemedicine and video features facilitate remote care. Other key features include billing, lab integration, scheduling, and reporting.

blueEHR is suitable for any practice size, from solo physicians through to practices with over 1,500 users, and is available in multiple languages. As a cloud-based solution, it can be accessed from any device with an internet browser installed, with a native web app available for use on tablets and mobile devices.

KEY HIGHLIGHTS

- No-code/low-code customization
- FHIR-ready and HL7 compliant
- Integrated telehealth, billing, and patient portal
- Scalable for solo providers to enterprise networks
- Value-based care support and real-time analytics
