EHR IN PRACTICE

CHARTLOGIC EHR EXTENDED PROFILE

ChartLogic

OVERVIEW

The aim of ChartLogic’s cloud-based EMR is to capture and chart patient encounters through voice technology Charting patients’ symptoms and test results is made easy because the practitioner need only use their voice and the software does the rest.

Chartlogic has patented PrecisionVoice software to accurately recognize the speech of medics and ensure navigation around the chart is fluent and efficient. The software includes a library of specialty-specific vocabulary that combines with customizable templates to make charts that fit specialty needs. This voice tool allows a patient record to be created in approximately 90 seconds.

ChartLogic EHR allows more than just the charting of patient notes. There is also an ePrescribe system, a template builder to help with billing and material that can be given to patients to educate them about their conditions. There is also a messaging system and a patient tracker, all available through a central dashboard. Chartlogic offers all the information needed for a single patient on one screen – including their history, diagnosis codes, referral reply letters, and more.

ChartLogic offers additional services to support medical practices, including data conversion, helping to convert your current notes into Chartlogic EHR templates. There is also the offer of Meaningful Use consultation and further training and implementation services.
