EHR IN PRACTICE

REDOC POWERED BY XFIT EXTENDED PROFILE

net health

OVERVIEW

ReDoc powered by xfit is an EHR aimed specifically at rehab therapy professionals working in hospital and private practice environments. It can be used by physical therapists, occupational therapists, and speech-language pathologists to complement and streamline therapy workflows.

ReDoc offers exact compliance with essential rehab requirements - it is also fully interoperable. The software integrates with FOTO (Focus of Therapeutic Outcomes) and to other essential rehabilitation software. It is fully interoperable, and the HL7 interface provides a seamless exchange of information so that records and results never get stuck or sent back.

As a cloud-based platform, it allows medical practitioners to access critical information on the go and helps with remote management of the practice. ReDoc can also increase practice efficiency through an optional appointment and scheduling tool, electronic faxing, and fully accessible exercise management and home exercise program.

Dedicated support is offered on request five days a week, twelve hours a day. This includes pre-implementation planning, on-site training, and continued education and training.
