EHR IN PRACTICE

KIPU EMR

EXTENDED PROFILE

Kipu

OVERVIEW

Kipu EMR is a cloud-based EMR developed by Kipu Health for behavioral health and addiction treatment providers. The software focuses on addiction treatment centers, mental health clinics, and other specialty care organizations that need tools for clinical documentation, patient management, and administrative workflows.

Unlike general-purpose EMR systems, Kipu combines clinical records with operational tools such as admissions tracking, scheduling, billing support, and analytics to help treatment programs manage both care delivery and administrative processes in one platform.

KEY FEATURES

The system is part of a broader software ecosystem developed by Kipu Health, which also includes CRM, RCM, and compliance tools. Kipu EMR's core tools include:

- **Patient charting and clinical documentation:** Allows clinicians to create and manage electronic charts using templates and customizable forms.
- **Scheduling and appointment manager:** A calendar system that helps teams manage individual and group appointments. Staff can track availability, monitor upcoming sessions, and send automated reminders to reduce missed appointments.
- **Patient engagement:** The platform includes a patient portal where individuals can access medical information, view appointments, and communicate with care teams.
- **Telehealth:** Kipu EMR's telehealth sessions support virtual care by allowing clinicians to meet with patients remotely without switching between different tools.
- **Medication management:** The software includes medication tracking and e-prescribing tools. Clinicians can review medication histories, manage prescriptions, and monitor drug interactions to support safer treatment planning.
- **Reporting and analytics:** Kipu EMR provides reporting features that help organizations analyze clinical and operational data. Administrators can generate reports on patient outcomes, financial performance, and operational metrics.
