EHR IN PRACTICE

TRUBRIDGE

EXTENDED PROFILE

TruBridge®

OVERVIEW

TruBridge (formerly CPSI) is a healthcare technology and services vendor offering revenue cycle management, EHR, coding, and related support for rural, critical access, community, and ambulatory providers.

The TruBridge EHR has a unified architecture built around a single patient record and shared database developed to reduce duplicate data entry, improve information consistency across departments, and provide clinicians with a more complete view of patient history across inpatient and ambulatory settings.

CORE FUNCTIONALITY

- Clinical documentation
- Computerized physician order entry (CPOE)
- E-prescribing
- Patient scheduling and registration
- Health information management
- Financial and revenue cycle integration
- Patient engagement tools
- Reporting and analytics dashboards
- Interoperability through HL7 and FHIR standards

As above, rather than treating the EHR and revenue cycle as separate systems, TruBridge integrates patient care workflows with billing, coding, claims management, and financial reporting.

Its FHIR API also allows approved apps, providers, and patients to access clinical data securely. For patients, this means health information can be shared with third-party applications through supported integrations, while providers gain access to more connected patient records across care settings,

REBRAND FROM CPSI TO TRUBRIDGE

CPSI rebranded in early 2024 to unify the vendor's offerings under a more cohesive suite of financial and clinical solutions
