EHR IN PRACTICE

# PRACTICESUITE EXTENDED PROFILE

practicesuite

## OVERVIEW

PracticeSuite is a flexible, all-in-one EHR and EMR built to help healthcare organizations run front-office, clinical, and revenue-cycle tasks from a single platform. Its core modules include practice management, ONC-certified EHR, patient portal tools, telehealth, medical billing, and RCM reporting.

# KEY CAPABILITIES:

- Appointment scheduling
- Patient registration and intake workflows
- Patient communication tools
- Patient kiosk
- Multi-practice management dashboards

Healthcare providers can use the platform to maintain patient histories, document encounters, and access relevant clinical information alongside administrative data. Billing is also a central part of the PracticeSuite platform. It supports claims management, electronic remittance advice (ERA), denial workflows, appeals, and revenue reporting.

For billing companies and larger healthcare groups, PracticeSuite also offers tools for monitoring performance across multiple practices, tracking financial metrics, and managing complex revenue cycle processes.

The platform supports appointment scheduling, claims processing, patient records, patient check-in, and patient communication, while its billing side is designed for large volumes and multiple specialties. It is particularly popular among practices managing complex billing workflows and those across multiple locations.
